SUMMARY

Practical platform and DevOps systems builder with hands-on Linux, Docker Compose, workflow automation, and operations discipline. Creator of StarkGrid, a private MVP/demo-ready governed ingestion and operational evidence platform used as source-backed proof of platform design, automation, observability, and runbook habits. Background combines technical lab infrastructure with real-world operations experience in logistics, fulfillment, inventory, handoffs, and reliability.

TECHNICAL SKILLS

- **Platform:** Linux, Docker Compose, SSH, Tailscale, NFS, service checks
- **Automation:** Bash, Python, n8n, Git/GitHub/Gitea, Maven
- **Observability/Data:** Athena Observer, Kafka/Redpanda checks, JSON evidence, source-backed search
- **Development:** Java, Spring, Maven, JavaScript/TypeScript familiarity

FEATURED PROJECT: STARKGRID

Private MVP/demo-ready governed ingestion and operational evidence platform

- Built StarkGrid as a private, demo-ready platform for deterministic ingestion, workflow governance, operational evidence, and infrastructure validation; no production customer claim.
- Built a multi-node lab topology with Jarvis, Friday, Ultron, and shared evidence/storage concepts while keeping operational proof private and sanitized for public/career materials.
- Validated governed proof path: Hecate policy gate → Friday n8n → Jarvis benchmark harness → Athena/Search evidence.
- Final Rocketbook proof run: rocketbook-20260603T014846Z; Search sourceBacked / documents: 1842.
- Captured Ultron GTX 1080 remote GPU-capable worker evidence from athena-runtime-plans-recent.
- Caveat: GPU OCR and embeddings were intentionally not enabled; the proof shows governed distributed worker visibility and GPU-capable node discovery, not production GPU OCR acceleration.

PROFESSIONAL EXPERIENCE

Founder & Consultant / Creator — StarkGrid

Jul 2024 – Present

- Created a governed ingestion and evidence platform using Linux hosts, Docker Compose services, Java/Spring/Maven components, Python automation, Redpanda/Kafka checks, n8n workflows, Athena observability, and search evidence.
- Wrote runbooks, validation checks, caveats, and source-backed career proof so reviewers can evaluate the system without relying on unsupported claims.

Operations — FedEx

Jul 2022 – Jun 2026

- Built logistics and operations habits around shift reliability, status accuracy, repeatable routines, handoffs, and visible execution.
- Applied operator discipline to platform work: clear service state, checklists, runbooks, and practical troubleshooting.

Floating Meat Manager — Price Chopper Supermarkets-Market 32

Jul 2018 – Apr 2022

- Managed cross-store retail food operations with inventory/shrink awareness, workflow discipline, quality expectations, vendor coordination, and team handoffs.
- Improved practical process judgment in time-sensitive, customer-facing environments where reliability and execution mattered.

Fulfillment — Azar Displays

Jul 2021 – Sep 2021

- Supported fulfillment and shipping operations with attention to order accuracy, packaging flow, throughput, and handoff quality.

Butcher — White Haven Market

Sep 2019 – Jul 2020

- Supported daily retail meat operations through product preparation, quality awareness, customer service, and dependable execution.

EDUCATION

Colorado Technical University

Bachelor of Science — IT Software Engineering

2016 – 2019

GPA/Grade: 3.59
